PXR reporter dose-response (OPA_PXR-046): 4PL fits for 20 compounds

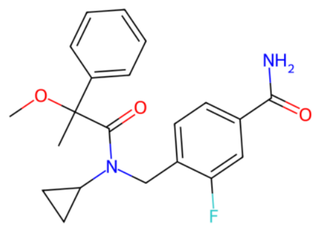

Measured well (n = 1 per concentration) — 4PL fit — Fitted EC_{50}

$pEC_{50} = -\log_{10}(EC_{50} / M)$; ( ) = 95% profile-likelihood range, only a bound where the data do not close it (no EC_{50} line then).
Response = luciferase signal normalised to the positive control (dimensionless). Baseline fixed at 0, plateau ≤ 2. Identical x- and y-limits in every panel.
